

Kiana Realty Growth Platform

Premium property discovery, CRM operations, site-visit automation, field mobility, virtual tours and AI-enabled customer success — under one hood.

Prepared for Rushikesh

rhushikesh@kianarealty.com | May 2026

The proposal is not for a website. It is for a growth operating system.

We start small, show visible business impact, then scale only after confidence is created.

Rushikesh wants to avoid the traditional route:

- No heavy office-first setup with high fixed manpower.
- No blind ₹3L–₹4L/month ad burn without owned learning.
- No scattered WhatsApp follow-ups and manual visit chaos.
- No generic CRM that does not fit leisure, villa and land sales.

Insignia proposes a partner-led alternative:

- Premium customer-facing digital brand for villas, land and curated properties.
- Admin CRM and operating cockpit for lead-to-closure discipline.
- Field-team app/PWA to reduce WhatsApp dependency on site visits.
- Optional Business-in-the-Box operations so Kiana can scale without hiring everything upfront.

Partner model

Technology + marketing + operations + customer success

What we heard from you

The deck is designed around the real operating gaps discussed with Rushikesh.

“I do not want the traditional shop + manpower + operating cost model. I want the right technology in place.”

“If I promote land in Karjat, enquiries may actually want a villa in Lonavala or somewhere else.”

“Regional teams handle visits and follow-ups; scheduling and time slippage are painful.”

“Lead generation, attending leads, site visits, inventory portfolio, CRM and dynamic website should work in a proper way.”

“Website is a major lead capture channel; social should route people to landing pages and retargeting.”

“AI can help if it captures requirement and routes to booking; inbound is better than blind outbound.”

Today's leakage is not only in lead generation — it is in handoff discipline.

The business needs a system that remembers every touchpoint and pushes the next best action.

Future state: Kiana becomes a tech-enabled real-estate command center.

One brand, one buyer journey, one admin system, one field workflow, one success partner.

Customer-facing trust

Premium villa/property website, location pages, inquiry forms, consultation and visit booking, property walkthroughs.

Admin operating engine

Lead pipeline, CRM stages, assignment, follow-ups, campaigns, call notes, visit outcomes, dashboards.

Business-in-the-Box option

Insignia can operate the CRM/campaign/ops engine while Kiana focuses on relationships, inventory and closure.

Your success guarantees our success — this is positioned as a customer-success partnership, not a one-time IT project.

Benchmark: SaffronStays-grade aspiration, but built for property purchase.

Rushikesh understands curated villa experiences. Kiana should now own the buyer journey behind that aspiration.

What we borrow from luxury villa platforms

- Cinematic hero imagery and premium destination storytelling.
- Location-first discovery: Lonavala, Alibaug, Karjat, Panvel, Virar/Vasai.
- Trust-led property cards with “book consultation / site visit” CTAs.
- Visual walkthroughs and high-quality content before a physical visit.

What Kiana gets beyond rental channels

Owned CRM data, visit workflows, follow-up history, field execution, document tracking, campaign attribution and closure pipeline.

Top reference benchmarks for internal research

These are outcome references only. Kiana receives an Insignia-developed single-window experience.

SaffronStays / StayVista

Luxury villa storytelling, destination pages, premium imagery, curated trust.

Matterport

Immersive 3D walkthroughs and remote property exploration.

Calendly

Simple scheduling, availability, reminders and booking links.

LeadSquared / Sell.Do / HubSpot

Real-estate CRM, lead capture, distribution, site visits and automation.

MyOperator / JustCall style platforms

AI-assisted inbound, IVR, call routing, recordings, campaign visibility.

Magicbricks / 99acres / Housing

Property search expectations: filters, listings, maps, similar options.

Insignia promise: one accountable partner — not a confusing collection of disconnected tools.

End-consumer journey: from “I want” to property closure

The customer may be a one-time buyer, but the buying journey needs repeated trust-building touchpoints.

The customer app is optional at first

Because most buyers may be one-time customers, a website/PWA and WhatsApp-first workflow should launch first. A customer portal/app becomes valuable for high-intent buyers, document upload, status visibility, brand trust and premium notifications.

Admin is the real product.

The website creates trust. The admin cockpit creates revenue discipline.

One lead record

Source, property interest, budget, timeline, calls, WhatsApp, notes, visits and follow-ups in one place.

One property record

Inventory, photos, videos, owner/broker source, legal status, visit availability and similar options.

One visit record

Customer, assigned field person, location, visit time, outcome, objections and next follow-up.

One campaign view

Lead imports, warm email journeys, WhatsApp opt-ins, call queues, voice/IVR and attribution.

One closure pipeline

From inquiry to booking to negotiation to documents to closure — with management dashboards.

One success rhythm

Weekly data review, campaign tuning, field feedback and next-phase roadmap.

Rollout philosophy: start visible, then deepen operations.

Every phase should create confidence, not dependence on blind future promises.

Phase gate rule

We move to the next phase only when the previous phase is accepted, adopted by the team, and visibly improving lead handling or customer experience.

30 days

Confidence launch target

90 days

CRM + visit engine target

180 days

Automation + field + portal target

12 months

AI-led scalable operating model

ROADMAP

Phase plan, schedule and pricing

The commercial model is designed to keep Kiana's first-year spend controlled while creating an owned asset and stronger conversion discipline.

Indicative rollout roadmap

Durations assume timely property data, brand approvals, integration access and user feedback.

Recommended first commitment: Phase 0 + Phase 1 + Phase 2 = approx. ₹11.2L over ~9–10 weeks, excluding channel/API usage and managed operations.

Pricing philosophy: convert recurring ad burn into owned capability.

Kiana should not simply spend more. Kiana should learn faster and retain the operating asset.

Current pattern

₹3L–₹4L / month

Ad spend pressure without owned
CRM memory

Proposed first 90 days

₹11.2L approx.

Website + CRM-lite + visit engine +
training

What changes

- The brand becomes visible and premium.
- Lead data stops being disposable.
- Site visits become trackable.
- Campaign learning compounds month after month.
- Managed ops remains optional but available.

Founder Partner pricing: Kiana receives a discounted contribution model because Insignia can reuse existing accelerators from prior internal/customer work — not because the solution is generic.

PHASE 0

Phase 0 — Strategy & launch blueprint

Outcome: Kiana and Insignia agree the operating model before build starts.

Business mapping

Lead sources, current team roles, sales stages, property categories, visit flow, closure flow and escalation rules.

Data readiness

First property sample list, photos/videos, lead sheets, current scripts, regional team details, location taxonomy.

Design readiness

Kiana brand direction, premium website moodboard, property card format, landing page copy and lead forms.

Commercial lock

Selected phase bundle, payment milestones, support model, managed operations choice and go-live calendar.

Success metrics

Response-time target, CRM adoption target, visit scheduling target, campaign performance baseline and weekly reporting rhythm.

Phase 0 workflow: from discussion to signed launch plan

The goal is to remove ambiguity before designers, developers and operations teams start execution.

Customer participation needed

2–3 working sessions, sample inventory, team access, call scripts and final decision on first locations.

Insignia deliverable

A launch blueprint with agreed screens, workflows, deliverables, schedule, acceptance criteria and phase commercials.

Phase 0: what you get, what you pay

This is the planning phase that protects both sides from wrong build assumptions.

1 week

Indicative duration

₹0.75L

Customer contribution

Blueprint

Main output

Go / no-go

Phase gate

Included

Discovery workshops, process maps, initial CRM fields, website sitemap, phase plan, launch checklist and commercial confirmation.

Not included

Full build, property data cleanup at scale, paid campaigns, channel/API costs, production photos/videos or legal verification.

Phase 0 fee can be adjusted into Phase 1 if Phase 1 starts immediately after blueprint approval.

PHASE 1

Premium website + CRM-lite launch

Make Kiana look premium, capture every enquiry and give the team a first usable operating layer.

Phase 1 CX: a premium property discovery experience

The buyer should feel Kiana is curated, credible and premium before the first call.

Website experience should include

- Full-screen villa/resort hero with warm orange CTA and floating navigation.
- Explore by location: Lonavala, Alibaug, Karjat, Panvel/Navi Mumbai, Virar/Vasai and future regions.
- Explore by lifestyle: hill villas, coastal estates, farmhouses, land, senior living and investment properties.
- Property pages with photos, videos, location story, brochure, consultation and site visit booking.
- Lead forms designed around “I want...” rather than only generic contact capture.

30 properties

Recommended initial curated inventory sample

5 locations

Initial location storytelling pages

Website pages and sections: what the consumer sees

This is not a basic “properties” page. It is a guided buying journey.

Home

Hero, trust story, lifestyle categories, location cards, featured properties, free consultation CTA.

Location pages

Lonavala/Khandala, Alibaug, Karjat, Panvel, Virar/Vasai with investment and lifestyle narrative.

Listing page

Filters for location, budget, property type, visit availability, virtual tour and legal/document status.

Property detail

Photos, video, map, amenities, similar options, schedule visit, consultation and brochure download.

Buyer journey

“I want villa / land / farmhouse / investment” decision flow to qualify intent and route lead.

Contact / team

Team touchpoints, WhatsApp, call, video consultation, site-visit expectation and support promise.

Design language: aspirational, resort-like, cinematic — but tied to clear lead capture and site-visit action.

Phase 1 admin: CRM-lite workflow

The first backend should make every enquiry visible, assignable and trackable.

Phase 1: what you get, what you pay

The purpose is to launch a credible premium brand and stop losing leads in manual handoffs.

3 weeks

Indicative build duration

₹3.95L

Customer contribution

Website + CRM

Core output

Go-live

Public launch

Included deliverables

SPA website, location pages, listing pages, property detail template, enquiry forms, CRM-lite admin, basic notifications, first 20–30 listings, lead import template and launch training.

Phase gate success

Customer can visit website, enquire for a property, receive confirmation, and Kiana/Insignia team can see and act on the lead inside CRM.

Recommended payment: 40% kickoff, 40% design/build approval, 20% go-live/UAT.

PHASE 2

CRM operations + site-visit engine

Turn enquiries into scheduled visits, regional handoffs, follow-ups and management dashboards.

Phase 2 admin cockpit: the daily operating room

The call-center/admin team should know exactly who to call, why, and what happened next.

Pipeline stages

New, contacted, qualified, consultation, visit planned, visited, negotiation, won/lost/nurture.

Task engine

Daily follow-ups, missed calls, reschedule requests, high-intent callbacks and aging leads.

Call notes

Call disposition, objections, next action, recording link and owner assignment.

Visit view

Upcoming visits, agent assignment, location, customer ETA, visit outcome and follow-up.

Management dashboard

Lead source, conversion, visit rate, agent productivity and campaign outcome.

Site-visit workflow: fewer missed handoffs, stronger follow-up memory

This workflow addresses the secondary/leisure-market scheduling reality: visits are pre-planned and timing shifts.

Phase 2 dashboards and training

Rushikesh should see business performance without manually asking every person for updates.

Daily lead board

New leads, hot leads, aging leads, missed follow-ups and unassigned enquiries.

Site visit board

Upcoming visits, no-shows, completed visits, outcome status and rep notes.

Campaign board

Source, campaign, location interest, responses, bookings and conversion stages.

Training included

Admin user training, CRM stages, lead entry SOP, follow-up SOP, visit scheduling SOP and reporting rhythm.

Manager rhythm

Weekly review: what came in, what got contacted, what got visited, what got converted and where leads leaked.

Acceptance gate

Team can manage a full lead-to-visit-to-follow-up journey without relying only on memory or WhatsApp forwarding.

Phase 2: what you get, what you pay

This is the phase where the business starts becoming measurable.

5 weeks

Indicative duration

₹6.50L

Customer contribution

CRM ops

Core output

Visit engine

Business value

Included deliverables

Full CRM pipeline, task engine, call notes, visit scheduler, assignment, visit reminders, outcome capture, dashboards, admin training and UAT.

Business outcome

Kiana can see lead source, follow-up status, visit conversion and where closure is getting delayed — without building a large team first.

Recommended payment: 30% kickoff, 30% workflow approval, 30% UAT, 10% post-go-live stabilization.

A man in a dark suit is holding a tablet and showing it to a man and a woman. They are standing in front of a modern, multi-story house with large windows and a swimming pool. The man is wearing a light blue button-down shirt, and the woman is wearing a white blouse. The scene is set during the day with soft lighting.

PHASE 3

Marketing automation + warm outreach

Move from cold-calling pressure to warmed, segmented, measurable outreach.

Phase 3 outreach strategy: make calling warmer before calling harder

A lead should see Kiana, interact with content, and then be called with context.

Why this matters

Calling 10,000 people cold is manpower-heavy. Calling 300 people who opened, clicked, replied or shortlisted is a much better use of time.

What Kiana gets

Campaign segments, templates, warm-call lists, attribution and visibility into which location/property themes create real intent.

Campaign workflow: from lead mining to booked visit

The system supports lead generation, lead mining and nurturing without depending on a single channel.

AI/data features are introduced progressively: enrichment, match suggestions, lead scoring and next-best-action — only after the baseline CRM data becomes reliable.

Brand and content engine: premium creatives for real estate intent

Villas and retreats need emotion. Land and investment properties need logic. The platform supports both.

For villas / Alibaug / Lonavala

Reels, photo-led pages, virtual walkthroughs, premium story, lifestyle copy, family and weekend-retreat emotion.

For land / Karjat / growth corridors

Investment rationale, road access, plot facts, legal/document clarity, location intelligence and comparable options.

For suburban homes / Virar / Panvel

Affordability, connectivity, family upgrade, price bands, visit scheduling and similar inventory alternatives.

Phase 3: what you get, what you pay

This phase changes the outreach rhythm from manual cold efforts to measured warm funnels.

5 weeks

Indicative build duration

₹5.75L+

Customer contribution

Campaign engine

Core output

Channel costs

Paid separately

Included deliverables

Lead import, dedupe, segments, templates, campaign journeys, landing-page routing, warm-call queue, campaign dashboard and pilot outreach support.

Additional costs

Email/WhatsApp/SMS/call/voice/API usage, paid ads, lead database purchases, creative production and large-scale data enrichment billed as selected.

Recommendation: run one controlled pilot per location theme before broad blasting.

PHASE 4

Field team mobile app / PWA

Give the ground team customer context, property alternatives and visit outcome capture at the site.

Phase 4 field experience: from WhatsApp forwarding to guided execution

The field app is necessary because regional teams are the conversion bridge.

What the field executive sees

- Today's visits with customer name, phone, location and property interest.
- Primary property and nearby alternatives to show if the first one does not fit.
- Customer budget, objections, previous notes and preferred language.
- Visit outcome: interested, maybe, more options, negotiate, lost, reschedule.
- Photo/video capture and new-property acquisition form.

Offline-first

Draft notes and media capture for weaker networks

Geo context

Visit and property capture with location reference

Property acquisition workflow: ground team turns supply into structured inventory

The same app can document new properties before they become public listings.

Business value

Kiana's property portfolio becomes searchable, comparable and reusable across website, campaigns, calls and site visits.

Control value

Admin can keep some properties private, some public, and some only visible to field team for high-intent buyers.

Field app modules and training

Adoption succeeds only if the app is easier than scattered WhatsApp messages.

Today's schedule

Visit cards, ETA, route/context, customer and property summary.

Property cards

Photos, facts, documents, pricing notes, alternatives and objection-handling points.

Outcome capture

Visit outcome, notes, objections, follow-up date, photo/video upload and next action.

New inventory capture

Ground team can document properties before admin publishes them.

Training

Field team SOP, short videos, first-week handholding and weekly feedback review.

Control

Role-based access: field reps see assigned customers and approved property data only.

Phase 4: what you get, what you pay

This phase turns regional ground execution into a repeatable, measurable process.

5 weeks

Indicative build duration

₹7.50L

Customer contribution

Mobile/PWA

Core output

Field adoption

Phase gate

Included deliverables

Field login, schedule view, customer context, property cards, visit notes, outcome capture, property acquisition form, media upload, admin sync and training.

Business outcome

Field team can host customers, show alternate listings, capture outcome and bring new supply into the system without waiting for manual admin entry.

Works first as PWA for speed; native Android/iOS can be considered after usage is proven.

PHASE 5

Customer portal + virtual tours

Add premium remote evaluation, saved properties, document workflow and buyer status visibility.

Customer portal: optional app-like experience for high-intent buyers

For most one-time buyers, portal/PWA is better than forcing a mobile app too early.

Saved properties

Buyer can save shortlisted villas, land or homes and compare alternatives.

Visit status

Scheduled, confirmed, completed, rescheduled or follow-up pending.

Document upload

KYC, requirement details and buyer-side documents uploaded securely.

Communication history

What was shared, when, by whom and what the next step is.

Brand value: Even if the buyer never downloads an app, a premium status portal makes Kiana feel organized and trustworthy.

Matterport-like virtual tour pipeline

We offer an Insignia-managed virtual tour experience benchmarked against world-class real-estate walkthrough platforms.

Why it helps

Remote buyers can shortlist before travelling. Sales team can revive interest after site visit by sharing a premium, guided digital experience.

Where to start

Pilot with 2–3 properties where visuals matter most: Lonavala villas, Alibaug coastal homes or premium farmhouses.

Document and closure workflow

From premium discovery to closure, buyers need clarity on what happens next.

Phase 5: what you get, what you pay

This phase is for premium buyer experience and remote evaluation.

7 weeks

Indicative build duration

₹8.50L+

Customer contribution

Portal + tours

Core output

Media costs

Paid separately

Included deliverables

Customer portal/PWA, saved properties, visit status, document upload, property comparison, tour embeds, document checklist and closure workflow foundation.

Additional costs

Virtual tour capture, professional photography, drone/video production, 3D rendering, floor-plan conversion and large media storage billed by scope/property.

Recommendation: do not start with too many tours; pilot only properties where visuals will actually move buyer intent.

PHASE 6

AI-native growth layer

Use AI where it improves conversion discipline — not as a gimmick.

AI layer: useful, controlled and feature-flagged

AI should support humans, not replace judgement in high-ticket real estate conversations.

AI lead qualification

Capture location, budget, timeline, property type and urgency from inbound conversations.

AI property matching

Suggest alternatives when a Karjat enquiry actually wants Lonavala-like lifestyle.

AI next best action

Recommend callback, visit, nurture, brochure, alternate property or escalation.

AI visit summary

Turn field notes into structured CRM summaries and follow-up actions.

AI campaign assist

Draft location-specific email, WhatsApp and landing-page copy.

AI property intelligence

Assist research on area, price bands, competitive listings and buyer personas.

Feature flags allow Kiana to turn AI modules on gradually and pay only for what is enabled and useful.

AI voice strategy: inbound first, outbound with guardrails

For high-ticket sales, AI should qualify and route — not pretend to be a full human closer on day one.

Inbound AI assistant

Best starting point: customer has already engaged through website, WhatsApp, consultation or missed call. AI captures requirement and schedules next step.

Outbound voice blast / IVR

Use short, controlled messages for lead warming: “Press 1 / reply YES / book slot” and route interested contacts to human or AI inbound flow.

Human escalation

Every AI interaction must hand off to a human for negotiation, complex property questions, legal concerns or high-value buyer confidence.

Multilingual training

Hindi / English / Marathi scripts can be trained in phases with standard property facts, FAQs, disclaimers and call summaries.

Phase 6: what you get, what you pay

AI pricing depends on volume, channels, languages, voice minutes and the number of enabled modules.

8 weeks+

Indicative rollout

₹6L–₹15L

Build contribution range

Usage based

Voice/AI/API costs

Feature flags

Control model

Included depending scope

AI qualification, AI summaries, property matching, lead scoring, AI inbound pilot, campaign assistant, knowledge base and admin monitoring.

Governance

Scripts, disclaimers, escalation rules, consent/opt-out, human review, AI hallucination controls and periodic retraining.

Recommendation: start with AI summaries + inbound qualification before scaling outbound voice automation.

Business-in-the-Box: Kiana can own the platform without hiring everything upfront.

Insignia can run the operating layer while Kiana focuses on relationships, inventory and closure.

Technology partner

Website, CRM, field app, customer portal, AI layer, dashboards, integration and support.

Marketing partner

Campaign setup, lead imports, segmentation, landing pages, nurture journeys and creative coordination.

Operations partner

CRM hygiene, call-center workflow, site-visit coordination, reporting, follow-up governance and weekly reviews.

Choice remains with Kiana: fully managed, co-managed, or transfer to Kiana's internal team after stabilization.

Managed operations pod: optional monthly add-on

This is the “single-window” model where Insignia provides people + process + tech success.

Starter Support

₹0.75L–₹1.25L / month

Product support, CRM hygiene, bug fixes, light campaign assistance and weekly check-in.

Growth Ops Pod

₹2.25L–₹3.25L / month

CRM/campaign operator, lead assignment support, visit coordination, dashboard reporting and success review.

Business-in-the-Box Pod

₹3.75L–₹5.50L+ / month

Managed CRM, campaign ops, pre-sales support, AI monitoring, success manager and process ownership.

Team members as extras

Pre-sales/call-center, campaign operator, field coordinator, data analyst, video/content operator or dedicated success manager billed by allocation.

Usage as extras

Email/voice/WhatsApp/SMS/AI minutes, cloud, storage, paid ads, lead databases and virtual-tour production billed as selected.

Customer onboarding, training and success rhythm

The platform succeeds only if Rushikesh's team actually uses it every day.

Commercial summary: indicative phase pricing in INR

Exact commercials are finalized after Phase 0 blueprint and selected scope/options.

Phase	Scope	Duration	Price	Main outcome
P0	Strategy & launch blueprint	1 week	₹0.75L	Workflow, data and scope clarity
P1	Premium website + CRM-lite	3 weeks	₹3.95L	Public launch + lead capture
P2	CRM ops + site-visit engine	5 weeks	₹6.50L	Trackable lead-to-visit pipeline
P3	Marketing automation + warm outreach	5 weeks	₹5.75L+	Segments, journeys and warm-call queues
P4	Field team mobile/PWA	5 weeks	₹7.50L	Regional execution + inventory capture
P5	Customer portal + virtual tours	7 weeks	₹8.50L+	Premium buyer experience
P6	AI-native growth layer	8 weeks+	₹6L–₹15L	AI qualification, summaries and voice layer

Recommended first approval: Phase 0 + Phase 1 + Phase 2 ≈ ₹11.2L over ~9–10 weeks. Managed operations and channel usage are optional/additional.

What you pay separately: clear extras and pass-throughs

This protects Kiana from hidden surprises and lets the operating model scale only when it creates value.

Cloud / hosting / storage

₹15k–₹60k+ / month depending traffic, media storage, backups and deployment choice.

Email / SMS / WhatsApp / voice

Pass-through usage at actuals plus agreed management/handling, depending volume and provider.

AI usage and voice minutes

Billed by enabled model, call volume, language training and monitoring requirement.

Paid ads and lead databases

Ad budgets, lead purchases, enrichment databases and data-mining costs at actuals.

Photography / video / virtual tours

Per-property production cost depending capture quality, location, drone/360/3D requirement.

External expert costs

Legal/RERA checks, valuation, local consultant fees or domain-specific external services as needed.

All extras can be switched on only when Kiana approves the volume, channel and expected ROI.

Business value: more than cost saving

The goal is to make the same annual spend work harder by building reusable operating capability.

Lower leakage

Every lead, visit, call note and next action is tracked

Better warmth

Outreach shifts from blind calls to segmented warm queues

Higher trust

Premium branding and tours increase buyer confidence

Scalable team

Managed ops avoids premature hiring/training overhead

If Kiana spends ₹36L–₹48L/year only on ads

The spend creates leads but limited owned process memory. Learning can vanish when campaigns stop or team members change.

If the same spend funds platform + operations

Kiana gets a premium website, CRM, visit workflow, campaign intelligence, field app and buyer trust assets that compound over time.

The first objective is not “more tech”; it is faster response, better visit conversion, fewer lost leads and clearer founder visibility.

Definitions and assumptions

These keep scope clear before the formal contract.

Owned instance

Kiana owns the deployed instance, data, domain, branding, property inventory and business configuration.

Single-window solution

Insignia manages the technology, integrations, operations process and customer-success rhythm as one accountable partner.

Customer data

Kiana will provide inventory, lead sheets, scripts, team access, property facts, document status and approval for campaigns.

Compliance

Consent, opt-out, communication templates, RERA/legal language and document verification responsibilities must be confirmed.

Indicative pricing

Pricing is based on current understanding and will be finalized after data volume, integration depth and selected extras are confirmed.

Change control

New features outside approved scope are handled through phase gates or separate change requests.

Key risks and how we manage them

The strongest customer-success plan anticipates adoption and operations challenges upfront.

Weak property data

Use mandatory listing checklist and admin verification before publishing.

Team adoption

Keep WhatsApp notifications but make CRM/app the source of truth.

Outreach compliance

Use consent, opt-out, approved templates and compliant channel setup.

AI quality

Start inbound/warm-lead only, with human escalation and script control.

Scope expansion

Phase gates and acceptance criteria before adding advanced modules.

Field network issues

Offline-first notes/media capture and later sync.

Risk management is built into the rollout; it is not an afterthought.

First 30 days: recommended decision plan

Start with the highest-confidence path: launch visibility + capture leads + prove CRM discipline.

What we need from Kiana

Brand preference, first 20-30 listings, property photos/videos, lead sheets, team list, scripts and approval of contact templates.

What Insignia delivers

Premium launch, CRM-lite, forms, notifications, basic dashboards, training and Phase 2 readiness plan.

Appendix: references for internal research

Outcome benchmarks only; Kiana solution is delivered by Insignia as a unified platform.

Luxury CX

SaffronStays, StayVista, Airbnb-style curated discovery

3D / virtual tours

Matterport-style walkthroughs and remote evaluation

Scheduling

Calendly-style booking, reminders and routing

CRM / automation

LeadSquared, Sell.Do, HubSpot-style lead-to-closure discipline

Voice / communication

MyOperator, JustCall, Interakt, Gupshup-style channel capabilities

Listings/search

Magicbricks, 99acres, Housing-style property discovery expectations

The goal is not to expose tools; it is to give Kiana a polished experience comparable to top platforms under one Insignia accountable layer.

Let's build Kiana's real-estate growth engine.

One premium brand experience. One CRM cockpit. One field workflow. One customer-success partner.
